NOVA AI: Data Structures & Neural Systems - Page 1

Overview of Linked Lists and Algorithmic Complexity

A Singly Linked List consists of sequential nodes where each node contains data and a reference pointer to the subsequent node. Access time is O(n).

Historical Milestone: In October 2026, autonomous multi-agent systems reached human-parity in structured task planning and execution workflows.

NOVA AI: Machine Learning Architecture - Page 2

Retrieval-Augmented Generation RAG and Vector Embeddings

RAG systems partition extensive documents into semantic chunks and compute cosine similarity between query vectors and stored chunk representations.

Exam Question 1: Explain the difference between array indexing and linked list traversals.
Milestone: Spring Semester Exam scheduled for November 15, 2026 at 10:00 AM.
